Our Company

EXPERIENCE, RELIABILITY AND SECURITY

Our company is formed by professionals with expertise in the different sciences that environmental studies require. They are geologists, biologists, economists, chemists, anthropologists, sociologists, specialists in environmental sciences, etc.

We certify substantial experience in industry, energy, mining, services and governmental activities, with over 20 years of proven experience.

We have worked all over the country, which confirms our thorough knowledge of all the regions that constitute the territory of the Argentine Republic.

We own an infrastructure of offices, vehicles, computers, topographic and laboratory equipment which enables us to suitably carry out our work.

Looking towards the future

Our work focuses on achieving professional excellence, aiming to be a leading company providing environmental services nationally and internationally, contributing to sustainable development, environmental quality and human well-being.

Experience

OIL/GAS SECTOR

- Environmental Impact Studies
- Environmental Baseline Diagnoses
- Environmental Auditing and Monitoring
- Contingency Plans
- Environmental Management Plans
- Plans for the Abandonment and Decommissioning of Facilities
- Sanitation and Remediation
- Measuring and Modeling of Effluents, Particulate Matter and Sound Levels
- Environmental Liability Analyses
- Due Dilligence Report of Sites
- Procedures upon Archaeological Findings

We have performed numerous studies throughout the country, which have specially involved activities in the provinces of Santa Cruz, Chubut, Neuquén, Río Negro, Mendoza, Formosa, Salta and Tierra del Fuego.

We have experience in oil fields, off-shore operations, gas compressor plants, pipelines, distilleries, water injection plants, dehydration plants, crude oil treatment plants, services centers, 2D and 3D seismic surveys.

MINING PROJECTS

- Environmental Baseline Studies
- Environmental Impact Studies
- Update Reports
- Environmental Monitoring
- Biodiversity Studies
- Mine Closure Plans
- Bioremediation
- Revegetation Plans
- Environmental Management and Communication Programs
- Modeling and Measuring of Effluents, Particulate Matter and Sound Levels

As part of our track record, we have conducted studies for gold, silver, iron and copper mines, and aggregate quarries. A project on the brick-manufacturing activity in Argentina adds to this experience.

Our main clients in the sector are: Barrick Exploraciones Argentina SA, Cerro Vanguardia SA, Hiparsa, Minera Alumbrera Ltd., Minera Aquiline Argentina SA, Oro Plata SA, Orocobre SA, Sunshine Argentina SA, among others, having acquired thorough knowledge of the different areas we have covered around the country.

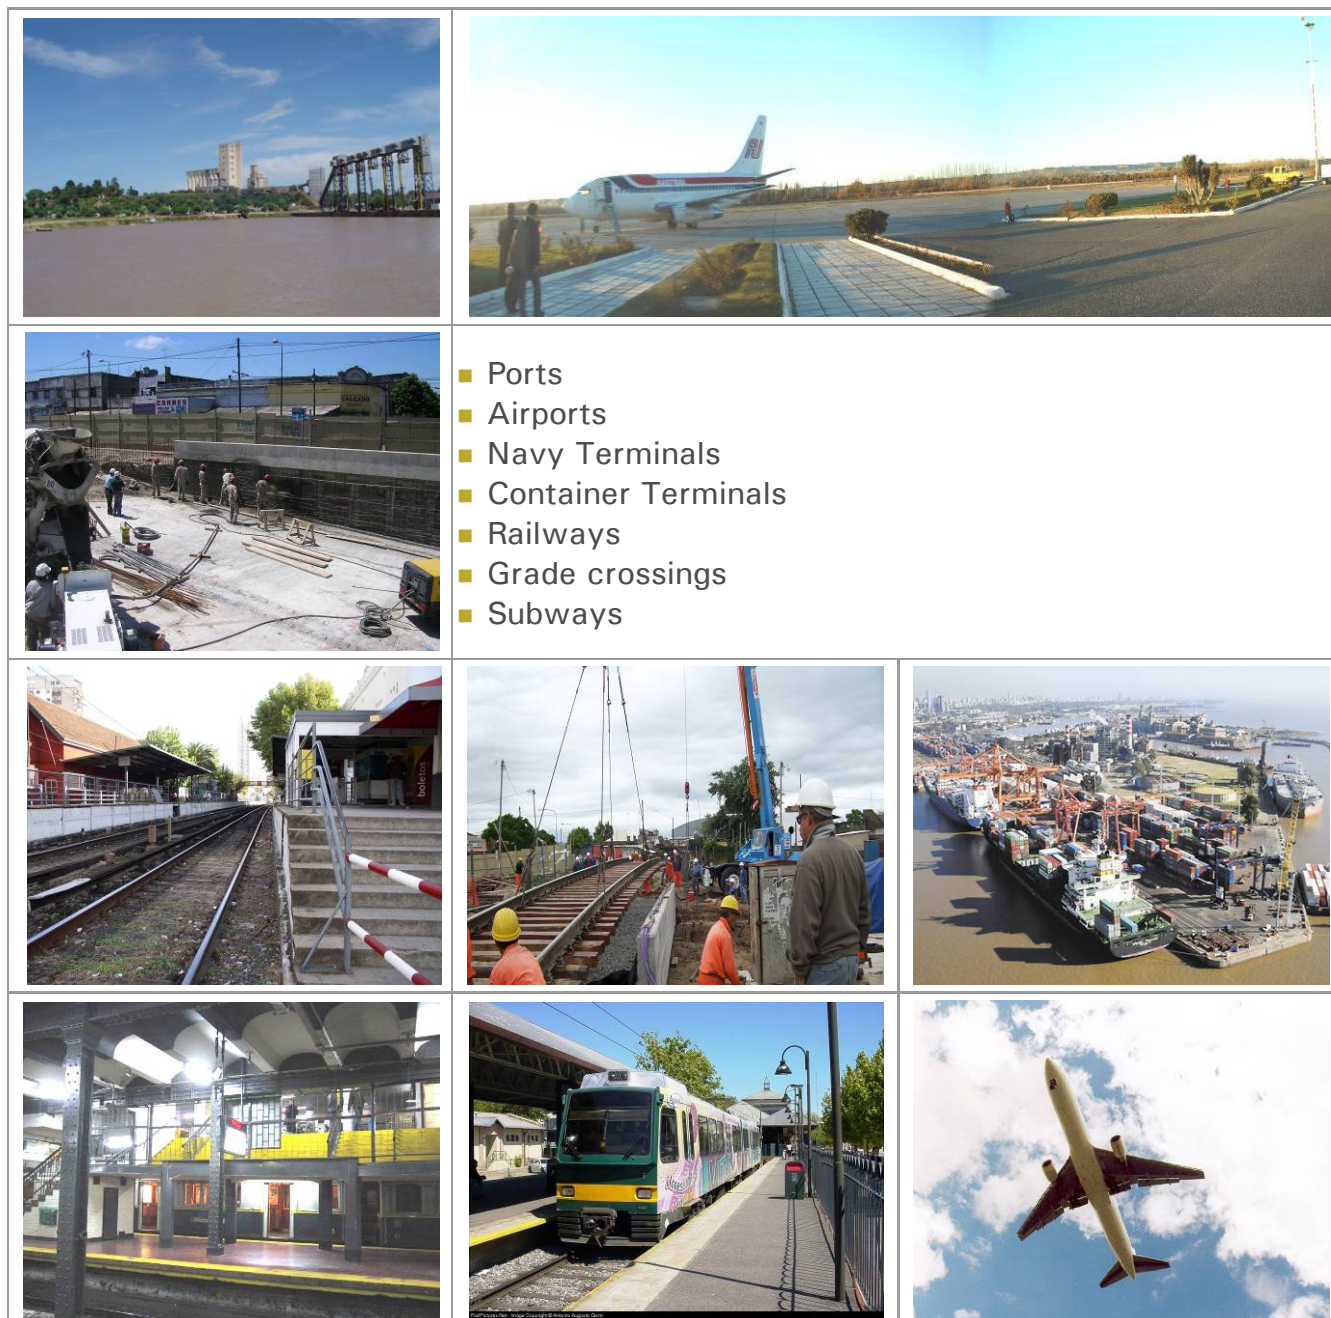

ENERGY PROJECTS

Hydroelectric Projects: Salto Andersen, Los Caracoles and Punta Negra Dam, Potrerillos (Argentina), Upper Basin of Bermejo and Grande de Tarija Rivers (Argentina-Bolivia), Garabí (Argentina-Brasil), Corpus Christi (Argentina-Paraguay), Caruachi (Venezuela), among others.

Main Clients: ANDE (Paraguay), General Electric, Edelca (Venezuela), Edenor, ENRE, Nucleoeléctrica Argentina SA, Pampa Holding SA, Pan American Energy LLC, Petrobras Energía SA, TranelSA and YPF SA, among others.

PORT, AIRPORT AND RAILWAY PROJECTS

We have conducted numerous studies, some of which are particularly noteworthy, such as those commissioned by National Port Administrations (Ports of Colonia, Montevideo, Nueva Palmiera and Fray Bentos, Uruguay), Ecoconsult (Port of Escobar), Indalar SA (Port of San Pedro), YPF SA (Oil Terminal in Chubut and Shipping Distributor in Port of Deseado), Zárate Port (Port of Zárate) and Aeropuertos Argentina 2000 (Jorge Newbery Airport).

Among the work we have done for the Railway sector, the following projects stand out: Coast Train Project (Tren de la Costa SA), extension of Subway Lines and construction of Grade Crossings (Subterráneos de Buenos Aires SE), General Belgrano Railway, Enafer Workshops (Ferrocarriles del Perú), Roca Railway (Ferrosur Roca SA).

URBAN PROJECTS

We develop and perform:

- Environmental Assessment Studies
- Solid Waste Management Programs
- Liquid Effluent Management Programs
- Comprehensive Environmental Management Plans
- Traffic Studies
- Sound Level, Odor and Gas Analyses
- Water and Soil Monitoring

For:

- Shopping Malls
- Tourist and Urban Centers
- Recreational Areas
- Hotels
- Warehouses and Land

We have conducted numerous studies for construction works and/or the expansion of shopping malls and hypermarkets (Cencosud SA, Supermercados Makro SA, Federico B. Camba y Asociados SA), fair grounds and recreational locations (La Rural SA, Argentinian Navy), hotels (Aspen Suites, Alarken SA, El Castillo SA, Marriot Plaza, Naindo SA), and tourist and urban projects (IRSA, Consorcio Bahía de las Tablas, Estancia De Marzi SA, Delta del Plata SA). A project worth highlighting is the Consolidation of Rural Colonies Project, Zoning and Environmental Management Plans (Republic of Paraguay).

ENVIRONMENTAL EDUCATION AND TRAINING

We develop educational proposals for teachers and students of all levels within the context of “formal” and “non-formal” Environmental Education.

- **Training Courses for Teachers:**

We design and give training courses to teachers of all levels: Kindergarten, Primary, Secondary School and College, adapted to the syllabus of each Province.

- **Courses for Company Personnel:**

We customize and give courses of Awareness in Environmental Education, Corporate Social and Environmental Responsibility, Sustainable Development and Responsible Production, aimed at company personnel and adapted to every hierarchic level.

- **Organization of Family Days:**

We organize Family Days for the corporate staff’s children or their entire family to approach issues of Environmental Education, Corporate Social and Environmental Responsibility, Responsible Development and any other specific subject that the company may want to inform about or create awareness in.

- **Organization of Courses for all audiences:**

We hold Seminars, Conferences, Workshops and/or Congresses on Environmental Education, Corporate Social and Environmental Responsibility, Responsible Development and any other subject that the company requests, open to the community, with the attendance of local and/or international lecturers.

- **Educational Workshops:**

We organize customized Educational Workshops on environmental issues related to corporate projects. Target audience: students and teachers of all levels that form part of the community where the project will be developed.

- **Workshops in Schools:**

We hold Recreational Workshops in public and private schools all over Argentina on diverse environmental subjects (contained in the existing syllabus or as a supplement to it), from kindergarten to secondary school levels, both in Spanish and in English. Workshops are customized to cover specific topics, according to the school’s requests.

- **School trips:**

We organize –upon request– guided trips to different sites of environmental interest, approaching a diversity of issues from an original perspective.

- **Environmental Fairs and Conventions:**

We offer collaboration with the organization and planning of environmental fairs held in schools or with conventions of governmental initiative.

- **Interinstitutional Breakfasts:**

We organize breakfast-style workshops aimed at corporate personnel and human resources supervisors with the purpose of exchanging experiences on matters of environmental education.

- **Environmental Agendas:**

We prepare Environmental Agendas on local issues, addressing particular programs and/or projects that companies are developing and which lack sufficient dissemination of information.

- **Projects/Programs**

We offer collaboration with the design, planning, initiation and supervision of Programs or Projects upon demand of Corporations, Governments and/or Educational Centers on general and/or specific environmental topics.

- **Environmental Agent/Developer Training:**

We train individuals to become environmental agents or developers and encourage them to take part in Public or Private Projects/Programs.

- **Customization of Degrees in Technical Studies:**

We design the syllabus for Degrees in Technical Studies, related to Mining, Oil, Gas, Electrical, Construction Industry sectors, etc., incorporating environmental contents in all of them.

- **Advice on Information Campaigns:**

We provide advice on how to best communicate environmental information to the mass media, educational establishments, NGOs and active forces of the different municipalities in regard to company development projects.

- **Exchanges:**

We organize educational exchanges for students, teachers and different professionals, both nationwide and worldwide.

- **Internships:**

We arrange for students of Technical and Bachelor Degrees in Environmental Sciences to do in-company internships, integrating them to the Environmental Departments of Corporations or to specific Government Environmental Projects.

- **Environmental Education Centers:**

In order to establish Environmental Education Centers (interactive, interpretative or informative), we carry out surveys and studies to identify local needs and concerns and seek to best address these by providing a good educational program.

- **Environmental Papers:**

We hire technical experts to write papers, press articles and/or reviews about certain environmental issues that need to be published in corporate /trade journals or magazines of general contents.

- **Hand-out Material:**

We provide advice on the making of flyers, brochures, billboard signs, packaging, merchandising, etc., for properly communicating environmental issues to company personnel within a corporate context or to the general public in the framework of a governmental program.

PUBLIC HEARINGS: PROFESSIONAL ADVICE AND ASSISTANCE

We provide advice on how to best prepare for delivering presentations at Public Hearings, a process in which projects are evaluated by the citizens and the enforcement authorities before its approval. All registered speakers can make contributions and suggestions. Our last presentations have been:

<http://www.chubut.gov.ar:80/noticias/archives/006827.php?id=-1>

January 13, 2009

No objections were made in the public hearing held by the Malaspina Wind Farm.

The Project consists of 40 wind turbines and forms part of Chubut's progress in the production of clean energy to the south of the province.

The Ministry of Environment and Control for Sustainable Development, through the Subsecretariat of Environmental Management held, in the locality of Camarones, the public hearing prescribed in the EIA process, according to Law 5439 of the Environmental Code of the province of Chubut, corresponding to the "Malaspina Wind Farm" Project, presented by the firm Centro Eólico Pampa de Malaspina SA.

The public hearing, that is part of the evaluation process of every enterprise, is a place for citizen participation and a relevant democratic instrument since every registered person may participate and contribute with suggestions and express concerns in regard to it.

In this opportunity, and before an audience hall packed with neighbors, the subsecretary of Environmental Management, Ariel Gamboa, who presided the hearing, stated "apart from assessing the project's environmental impacts, which is the main mission and function of the Subsecretariat, through this step of public hearing, the community and the components of the provincial state can be informed of the main wind energy projects that are being fostered and worked on to accomplish an important introduction of renewable energy into the provincial energy matrix, in accordance with the sustainable development policies that the province is undertaking as a State policy."

Later on, and after the accreditation of the registered speakers, Osvaldo Schanz, from Patagonia Third Millenium Foundation spoke about the need to change the national energy matrix and to strongly bet on wind energy.

As the hearing continued, Roberto Peneman spoke on behalf of the company, providing the technical details of the project, and afterwards gave place to the presentation of Estudios y Servicios Ambientales SRL consultants, in charge of the EIA, Marta del Carmen Córdoba and María Leonor Azagra, who moved on to explain the environmental aspects of the endeavour.

PROJECT FEATURES

The project consists of 40 wind turbines of 107- meters high to be installed in the zone of Pampa Malaspina, located in the surroundings of national route nº3 and at 130 kilometers away from the city of Comodoro Rivadavia; and aims to feed 40 mgwts of energy to the patagonian interconnected [system].

The hearing was also attended by Mariano Gutiérrez Azparren, legal advisor of the Ministry of Environment and by the advisors of the Ministry of State Office Coordination, Cristian Bork and Sergio Damico and municipal agents.

It's worth noting that no objections to the installation of the enterprise were observed, and inquiries were mainly made about the implementation of local workforce, the legislation for fostering wind energy and the impact on avifauna, concerns which were answered by the consultants.

Technical details and environmental impact reports were presented.
PUBLIC HEARING: no objections at all were made to the construction of the gas pipeline.

On-line Newspaper of Tierra del Fuego

The participants of the public hearing held in reference to the construction of the new undersea gas pipeline in the Strait of Magellan – that took place in the premises of IPRA in Río Grande – made no objections at all to the carrying out of the endeavor after the presentations of the technical details and the environmental impact reports.

During the Hearing, the community was informed about the scope of the project, which forms part of the program for the expansion of the transportation capacity of the Southern Gas Pipeline System, promoted by the National Secretariat of Energy.

According to the report presented by Estudios y Servicios Ambientales SRL Consultants, after several studies were performed in the Strait of Magellan “no critical impacts were detected” over the terrestrial and marine environments, although they noted that “there will be moderate and compatible alterations” due to the project features.

The hearing was attended by the secretary of Sustainable Development and Environment, Nicolás Lucas, of Hydrocarbons, Eduardo D´Andrea, by the undersecretary of Hydrocarbons, Daniel Blázquez, by the Director of Environmental Assessment, Ricardo Santolaria, of Strategic Planning and Environmental Management, Juan Cejas and by personnel of the Seretariat of Sustainable Development and Environment.

In representation of the firm TGS –contractor of the project– Florentino Tobares, engineer Adriana Endrigo and engineer Damián Sosa were present; whereas on behalf of Estudios y Servicios Ambientales SRL Consultants, the attendants were Leonor Azagra (engineer), Jorge Porchile (biologist), and Fernando Valdovino (geologist).

Furthermore, the consultants in charge of the environmental impact study will hold three audits during the development of the construction works, and one every three years after it is finished.

On its side, TGS Company provided details of the construction mode for the new gas pipeline, which will include the use of 5 to 6 vessels and which may begin in February 2009 and end in May of the same year despite, they cautioned, this time-frame “may expand”.

The layout and assembly of the undersea gas pipeline will be in charge of five subcontractors: SAIPEM; ACERGY; CONDUX and GLOBAL ODERBRECHT.

The total length of the gas pipeline will be 37.2 kilometers (the undersea sector is 35.7 km long) and the length of the terrestrial sectors will be 1.5 kilometers, 750 meters of which are on the side of Tierra del Fuego.

The total investment to be made amounts to an estimated 200 million dollars and the lifespan of the gas pipeline will be of 30 years´ time, transporting 7MM stm³ / day of gas. A TGS spokesperson emphasized that foreign companies specialized in this type of work will be responsible for the assembly of the gas pipeline, assuring that the work standards aim towards a maximum conservation of the environment.

AT THE PUBLIC HEARING SCHEDULED FOR TODAY

MANAGERS OF EÓLICA PICO TRUNCADO WILL ANSWER FOR THE MEGA-PROJECT

The mega-project of "La Deseada" Wind Farm, intended to be built in Pico Truncado for the production of 600 to 900 Mw of power, employing between 300 and 400 wind turbines, is reaching its structural stage. The public hearing will be held this afternoon at the city municipal movie theater.

Eólica Pico Truncado was formed a year ago and it is a subsidiary of the Spanish group Guascor, a 17-year experienced company in the sector that has built large wind farms in several European countries.

The executives who arrived yesterday in Pico Truncado, and who were previously interviewed by Diario Patagónico, are the project general manager Pedro Párbole (Spanish), engineer Angelo Zito (Italian) and board member Ricardo Pérez Ruiz (Argentine). They were accompanied by the general secretary of the Truncado Municipality, Gustavo Alvarez, and by Marta Córdoba, coordinator of the public hearing and representative of the environmental company.

Ricardo Pérez Ruiz, Marta Córdoba, Angelo Zito, Pedro Parbole and Gustavo Alvarez visited the news agency of Diario Patagónico in Caleta Olivia before continuing their journey to Pico Truncado. Caleta Olivia (agency)

In order to give a general picture of the enterprise, the promoters pointed out that it would require an investment of 1.000 million dollars and that, provided no major inconveniences arose, the first construction work on the site would begin by the middle of this year and by the end of 2010 the first 100 wind turbines could be installed.

These aerogenerators will be approximately 70 meters high and the rotor blades will range around 40 meters in diameter. The space to be occupied, in two sections, will amount to 6.300 hectares of land of municipal domain. A relevant piece of information is that this project does not require state funding as it responds to a private investment plan that will obtain a return when the generated power is commercialized through the interconnected national system.

PROJECT RELIABILITY

In the context of an informal conversation held with this news media, Pedro Párbole commented that "La Deseada" Project is similar to the one that the Guascor group has initiated in a region of Spain, where almost 400 Mw were achieved. At the same time, engineer Angelo Zito mentioned that the company that will be in charge of supplying the aerogenerators is yet to be determined, although he clearly stated that whoever it turns out to be will have to provide a broad guarantee of product quality.

For his part, Ricardo Pérez Ruiz noted that the Guascor group is in charge of making all the technological input to the project and that they have already begun the promotion and negotiation rounds with financial and multilateral entities in order to speed up the reception of contributions.

In this sense, he stressed, "this is not a public works undertaking in the sense that we are not asking the Nation for financing or for it to get into debt".

"This is one hundred per cent private and the one investing or getting into debt is the company itself, while the returns from the investment will result from the sale of power through the entity that administrates the Argentine electrical system", he specified.

Note: in the section detailing work experience, those reports presented before Public Hearings are identified as such.

PARTICIPATION IN FAIRS AND EXHIBITIONS

PDAC - Toronto, Canada

Since 2005, we participate in the Annual International Convention of the Prospectors and Developers Association of Canada (PDAC) -in the Pavilion of the Argentine Secretariat of Mining- that is held in Toronto, Canada, This convention gathers mining companies, services companies and professionals from all over the world.

III Expo 2010 – Engineering and Maintenance in the Mining Industry

Held in June 2010 in the city of San Juan and organized by Panorama Minero Magazine, Ambiental attended with its speakers.

Conference "The truth about Sustainable Mining"

Organized by ISalud University, the Association of Solid Waste and Gerencia Ambiental Magazine. We took part as advisors of contents, jointly with BEC law firm. The conference was held in November 2008 in the Auditorium of ISalud University, in Buenos Aires.

II International Exposition: San Juan – A Development Factor of Argentine Mining

Ambiental delivered a presentation at this event which was organized by Panorama Minero Magazine in San Juan, in May 2008, and addressed to the most important mining companies in the country.

The Holistic Environmental Management Plan for the Municipalities of Andalgalá, Belén and Santa María, under the coordination, organization and direction of Estudios y Servicios Ambientales SRL, was presented in a stand at the World Fair of Municipalities and Health that took place in Buenos Aires City.

Thousands of attendants from Argentina and other countries were greeted by the Environmental Agents who provided them with information on the activities they develop and the results they have achieved.

The exchanges that took place with other participating municipalities in this international gathering demonstrate the importance of the environmental management tasks performed by the Agents in Adalgalá, Belén and Santa María, jointly with institutions of the public and private sectors, companies and citizens that are committed to a better quality of life and environment.

The Environmental Agents benefited not only from the personal exchanges they had with professionals, technicians and government officials, but also from the rewarding experience of being a part of an international project that encompasses all the sustainable Municipalities.
